

Dr. Fixit Fastflex

HIGH QUALITY POLYMER MODIFIED FLEXIBLE CEMENTITIOUS WATERPROOFING MEMBRANE

Description

Dr. Fixit Fast Flex is a high elastic, waterproofing cement based material. With special waterproofing properties, easy to use by plastering, applying by using a brush and water brush or trowel. Can be painted or overlaid. Use with waterproofing for non-toxic water tanks, can be used with drinking water. (Passed the water quality test on toxic substances (heavy metals) of the Water Quality Control Department) Provincial Waterworks Authority. After mixing the two parts together, the liquid material can be applied on the desired surface. After drying, it looks like a rubber sheet. It has the property to prevent water seeping through, seamless and flexible, not cracking. Japanese standard

Dr. Fixit Fastflex is a 2-component cement-based waterproofing material, which is powdered (fine sand, sizing), liquid (modified acrylic polymer) and nontoxic substances, environmentally friendly - free Volatile Organic Compound (VOC), excellent waterproofing property - no leakage up to 10 m. hydrostatic pressure

Area of Application

- Concrete foundations, basements wall and lift pits.
- Swimming pools, water tanks and reservoirs.
- Concealed roofs, parking decks, bathroom, toilet, kitchen, balconies and planters.
- Any other concrete, cement or masonry surface subject to damage from moisture.

Rate of uses

* Theoretical consumption without allowance for loss.

Rate of uses		
	Kg/m ²	m ² /set (48 kg)
	Standard	
1 coats	1.10	43
2 coats	1.10	43
Total 2 coats	2.20	21

*Depending on surface conditions

Thickness

Thickness (micron)			
	Standard	At Least	At Most
1 coats	425	350	500
2 coats	425	350	500
Total 2 coats	850	700	1,000

WATERPROOFING MEMBRANE

Method of Application

1. Surface Preparation

- Allow new concrete and masonry substrate to fully cure prior application.
- All surfaces must be free from oil, grease, wax, dirt or any other form of foreign matter which might effect adhesion.
- Spalled Concrete must be sound before applied.
- Substrate should be reach a "Saturated Surface Dry" (SSD) condition (damp, without standing water)

2. Mixing

- Use Portland cement mechanical mixer at slow speed; add product powder part to liquid part in a clean container until a smooth and homogenous slurry mixture is achieved.
- Allow the mixed slurry to stand for 5-10 minutes for releasing air-trapped during the mixing prior to application.
- Mixing material must be use within recommend pot life.

3. Applications

- Can be applied by brush and water brush or trowel. **DO NOT** dilute with water. Recommend Coverage rate is approximately 1.1 kg./m²/coat for 1 mm. (Minimum 2 coat.).
- Allow the slurry to cure for at least 1 hour but no longer than 8 hours before applying second coat. Do not leave the first coat to dry longer than 8 hours.
- For tile adhesive application on surface allow surface to cure for 3 days prior. If first coat was cure over 8 hours, fix surface by applying 2 to 3 coats of **Dr.Fixit Pidifin 2K** for desire waterproof surface thickness or fix by applying **Dr.Fixit Fevimate XL** tile adhesive to act as top coat protection for **Dr.Fixit Fastflex**.

4. Curing

- For maximum protection, allow 12 to 24 hours curing time after second coat.
- Leave **Dr. Fixit Fastflex** at least 7 days to cure before filling or sealing water to test leaks.

Technical Information

Properties	Specification / Standard	Results
1.Mix Component (powder : liquid)	-	Mix Ratio 1.4 : 1 by weight
2.Polymer Content by TGA Polymeric substance, % Organic substance, % Ash, %	ASTM D 6370	25.0 8.3 66.7
3.Proprietary Polymer by FTIR	ASTM D3677	High quality modified acrylic polymer
4.Polymer/Cement Ratio	-	50-65% based on wet weight
5.Time of setting, hrs.	ASTM C 191	41.5
6.Tensile Strength -as cast -after 2 week aging at 50 °C -72 hrs at 23°C immerse in 0.5% NaOCl -72 hrs at 23°C immerse in 1.25% NH4OH -72 hrs at 23°C immerse in 3.7% HCl	ASTM D 412 (Dumbbell die C)	2.63 N/mm. ² 3.70 N/mm. ² 3.00 N/mm. ² 3.00 N/mm. ² 3.50 N/mm. ²
7.Elongation at Break -as cast -after 2 week aging at 50 °C -72 hrs immerse in 0.5% NaOCl -72 hrs immerse in 1.25% NH4OH -72 hrs immerse in 3.7% HCl	ASTM D 412	152.5 % 52 % 41 % 44 % 37 %
8.Adhesion in peel on mortar, N/width (25mm)	ASTM C 794	72.9
9.Crack Bridging 2 mm. width 1 mm. width after 10 cycles	ASTM C 836	Passed Passed
10.Resistance to water penetration	DIN 1048: Pt5:1991	No Water Penetration
11.Durometer Hardness, shore A	ASTM D2240	93
12.Chloride Content Not detected - Chloride free (D.L < 0.01%) No Corrosion effect	BS EN 480	0.007
13.Water Absorption	-	< 3%
14.Dry Film Thickness	-	1000 Microns
15.Vibration durability test against earthquake	JIS C 60068-2-59	No water leak after all test.
16.Intensity level of earthquake	JIS C 60068-2-59	Upper 6
17.Adhesion to Substrate, N/mm ²	ASTM D4541	1.6 N/mm ²
18.Adhesion to Concrete 7 day N/mm ²	ASTM D4541	1.25 N/mm ²
19.Immersion in Water Adhesion to Concrete 7 day	ASTM D4541	1.90 N/mm ²

WATERPROOFING MEMBRANE

Drying and Curing time

Substrate temperature	10 °C	25 °C	30 °C	40 °C
Surface (touch) dry, hrs.	3	1,30	1	0,45
Dry to over coat, minimum, hrs.	12	6	3	2
Dried/cured for service, day	7	5	4	3
Thickness Recommend, mm At least At most	0.7 mm 1 mm			

Drying and curing times are determined under controlled temperatures and relative humidity below 65%, and at average of the DFT range for the product.

Surface (touch) dry: The state of drying when slight pressure with a finger does not leave an imprint or reveal tackiness.

Dry to over coat, minimum: The recommended shortest time before the next coat can be applied.

Dried/cured for service: Minimum time before the coating can be permanently exposed to the intended environment/medium

Packaging

48 kg/set
Powder 28 kg.
Liquid 20 kg.

Precautions & Limitations

- **Dr. Fixit Fastflex** is not suitable for traffic area application.
- **Dr. Fixit Fastflex** is a premeasure package, do not dilute with water or add more sand or cement.
- **Dr. Fixit Fastflex** material should have topcoat coating over it. Do not leave it bare to the sun at all times.
- Do not leave first coat dry longer than 8 hours.

Dr. Fixit Fastflex

HIGH QUALITY POLYMER MODIFIED FLEXIBLE CEMENTITIOUS
WATERPROOFING MEMBRANE

Storage

- 12 month storage in sealed container and room temperature.

Health & Safety Precautions

- Non Flammable.
- Avoid contact with skin and eyes. Any splashes to the skin or eyes should be washed off with clean water.
- Wear mask when mixing.
- Wear protective gloves and eye protection when applied.

Disclaimer
